## Executive Summary

Professional in the Information Technology industry with a successful track record of managing everything from projects with a tactical focus to revitalizing an entire department.

- Forming and articulating long term goals, and achieving them by aligning day to day operations to fit within them and effective communication between upper management, technical staff, and non-technical colleagues.
- Experienced with modern project management theories such as Critical Chain, Agile, Gantt Charts, etc.
- Comfortable with public speaking, including presenting projects to team members, proposals to management, and large scale training.
- Using technology to increase automation and reduce costs.
- Incorporating a focus on security concepts and techniques into all layers of operations.
- Uniquely positioned to address the evolutionary changes occurring today in the Internet's infrastructure including DNSSEC (DNS security extensions), IPv6, Internationalized Domain Names, etc.

## Relevant Professional Experience

### **Principal**

2005 – Present

Superset Solutions, Inc.

- Maximized revenue for my clients through brand and marketing strategies related to the domain name space.
- Consulted with multinational corporations on various technical and policy aspects of applying for Internet generic top level domains.
- Interviewed vendor candidates in multiple countries for compliance with my client's RFPs, reported on results and provided recommendations.
- Managed design and implementation of custom software update solutions to meet client's specific needs.

## **General Manager, IANA**

2003 – 2005

The Internet Corporation for Assigned Names and Numbers (ICANN)

ICANN is responsible for promoting the security and stability of the Internet's key infrastructure and the global coordination of its unique identifiers (such as domain names and IP addresses).

- Worked with fellow senior managers on issues related to IPv4 address depletion, including the introduction of IPv6 name server addresses to the root DNS zone, IPv6 address allocation policy, etc.
- Revolutionized operations with automation, hiring necessary staff, and reorganizing responsibilities to appropriate staff members.
- Gave stakeholders the information they needed to confirm the achievement of agreed metrics and milestones.
- Extensive international travel to interface with key senior private and public sector infrastructure providers.

## **DNS Administrator**

2001 – 2003

Yahoo! Inc.

- Significant streamlining of worldwide DNS operations to improve effectiveness and dramatically limit downtime.
- Enhanced brand management strategies for the domain name portfolio by interfacing with marketing and legal departments to develop and implement appropriate policies and protocols.

## Education

**Bachelor of Arts**

Point Loma Nazarene College

**Associate of Arts**

Mesa Junior College

## Additional Information

**Charter Member**

2002 – 2003

ICANN Security and Stability Advisory Committee

Advised the ICANN community and Board on matters relating to the security and integrity of the Internet's naming and address allocation systems.

**Contributor**

1998 – Present

The FreeBSD Project

Design and development for an open source Unix operating system used on modern computer platforms by businesses all over the world.
